Mountain Weather Forecast

Snowdonia National Park

Forecast valid from 00:00 on Friday 09 Jun 2023 until 23:59 on Saturday 10 Jun 2023

Forecast Issued on Thursday 08 Jun 2023 at 14:58

Confidence: High for early fine and increasingly very warm conditions towards the weekend. Also for a risk of more changeable weather with showers from Saturday onwards. Moderate for exact timing of cloud clearance each morning. Low confidence in the timing and distribution of showers from this weekend.

Headline for Friday 09 Jun 2023: Early low cloud in the east soon clearing to a mostly sunny, warm day.

Mountain weather hazards on Friday 09 Jun 2023

Blizzards No Likelihood	**Heavy persistent snow** No Likelihood	**Storm force winds** No Likelihood
Gales No Likelihood	**Severe chill effect** No Likelihood	**Poor visibility** Low Likelihood
Thunderstorms No Likelihood	**Heavy persistent rain** No Likelihood	**Strong sunlight** High Likelihood

Forecast for Friday 09 Jun 2023

Weather: Occasional areas of broken cloud in the east of the park early morning, but soon clearing to leave a dry day with long spells of unbroken, warm sunshine. Fine and mostly clear during the evening. Rather breezy on summits and ridges.

Chance of cloud-free hill tops above 800m: 70% in the east at first, 90% elsewhere, becoming 100% for all by mid-late morning.

Low Cloud and visibility: Areas of low cloud at first in the east of the park, with bases 500-600m and tops 600-800m, meaning some higher slopes may lie above the cloud. Cloud lifting and breaking by mid-late morning, perhaps briefly obscuring those higher slopes in the east. Visibility outside of cloud generally very good throughout.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

High UV levels once again mean that sun protection is essential. Plenty of water is advised. Take care on ridges and summits especially, with some gusty winds at times.

Forecast for Saturday 10 Jun 2023

Weather: A dry and mostly clear start, though a few patches of low cloud could affect the far southeast of the park until mid-morning. Becoming very warm and humid. Temperatures may trigger a few scattered afternoon or evening showers or thunderstorms and these could be heavy, perhaps locally torrential. Rain could be accompanied by gusty winds.

Maximum wind: East or south-easterly 15-20mph, with gusts 25-30mph, perhaps increasing 35mph in or near any heavy showers/thunderstorms.

Chance of cloud-free hill tops above 800m: 95%, but 80% in the southeast until mid-morning.

Low Cloud and visibility: Isolated areas of low cloud in the southeast early morning, with bases 400-500m and tops 600-700m, meaning some higher slopes may lie above the cloud. Cloud lifting and breaking by mid-late morning, perhaps briefly obscuring those higher slopes in the southeast. Visibility outside of cloud generally good, though slightly hazy throughout. Locally poor or very poor in any heavy showers or thunderstorms with some temporary ragged cloud developing above forested areas.

Temperature: **Valleys:** Plus 12 Celsius rising to Plus 25 Celsius
At 800m: Plus 14 Celsius rising to Plus 17 Celsius
Freezing level: Above summits
